

Here is the comprehensive master specification document for the IOUBI Small Group Web Portal. This document is structured so that a web designer, UX engineer, and copywriter can use it directly as their blueprint.

Master Site Specification: IOUBI

Pre-Launch Portal

1. Project Objective & Target Audience

Objective: To introduce the IOUBI (I Owe You - Universal Basic Income) concept not as a financial product, but as a decentralized social protocol. The site will act as an educational hub, a proof-of-math sandbox, and a recruitment portal for thinkers, developers, and early adopters.

Audience: Small groups, systems thinkers, economists, engineers, and collaborative community builders.

Tone: Uncompromising, intellectual, visionary, and transparent. An invitation to an inner circle, not a mass-market sales pitch.

2. Global Branding & Visual Guidelines

- **The Paradigm:** Zero references to fiat money, crypto-tokens, "fixing" banks, or the gold standard. The system trades strictly in human time and 3-minute favors.
- **Primary Iconography:** The Deltar symbol. In all headers, logos, and UI elements, the Deltar must be rendered precisely, with its internal triangle pointing to the left.
- **UI Aesthetic:** Clean, architectural, and data-driven. High contrast (dark mode preferred) to emphasize glowing node maps and colorful flow charts.

3. Core Terminology & Messaging Dictionary

All copywriters and community managers must adhere strictly to these terms:

Concept	Required Terminology	Do Not Use
The Currency	3-Minute Favors / Human Time / Deltar	Money, Coins, Tokens, Dollars
System Payout	Automatic Dividend of Collective Efforts	UBI, Universal Daily Tip (UDT), Welfare
Debt / Credit	Borrowing from yourself (Postponing repayment)	Debt, Loans, Interest
Transaction Cost	Shared Contribution (1% per zero)	Tax, Wealth Tax, Fee

Macro Balance	The Unearthed Ratio of Equilibrium	The Golden Ratio, Trickle-down
Current System	A game of musical cages	The economy, the rat race

4. Site Architecture & Page Layouts

Page 1: The Landing Page (The Narrative Hub)

This page uses an "S-curve" winding scroll to take the visitor through a conceptual paradigm shift before asking them to dive into the math.

- **Section 1: The Hero (The Hook)**
 - *Visual:* The Deltar symbol (triangle pointing left), faintly glowing against a dark network background.
 - *Headline:* Beyond Money. Beyond Scarcity. Welcome to the Human Economy.
 - *Copy:* As AI accelerates and traditional markets collapse into financialized rent-seeking, fighting over a shrinking pool of money is a game of musical cages—and the bots are removing the cages faster than humans. It's time to opt out.
- **Section 2: The Pivot (Word Cloud S-Curve)**
 - *Visual:* A subtle, floating word cloud featuring terms like "Time Banking 2.0," "Post-Scarcity," and "Opt-Out."
 - *Copy:* We aren't fixing money; we are replacing it with human time.
- **Section 3: The Mechanics (S-Curve Center)**
 - *Concept 1: The 3-Minute Favor.* The unbreakable measure of value.
 - *Concept 2: 1% Per Zero.* A visual showing that users contribute 1% to the network for every zero in their balance, scaling perfectly with their use of societal infrastructure.
- **Section 4: The Payoff**
 - *Visual:* Two users shaking hands, with a glowing line routing a fraction of their exchange to a central pool.
 - *Copy:* Every transaction splits the contribution, funding the **Automatic Dividend of Collective Efforts**.
- **Section 5: The Router (Footer Navigation)**
 - Four distinct visual cards leading to the deep-dive pages: The Blueprint, The Architecture Map, The Sandbox, and The Assembly Room.

Page 2: The Blueprint (Mechanics & Timeline)

This page houses the deep economic theory and the roadmap to absolute abundance.

- **Section 1: The Time Peg ("Borrowing from Yourself")**
 - Explains that drawing from the system is simply moving your own future time to the present, fundamentally neutralizing the concept of interest.
- **Section 2: The Unearthed Ratio of Equilibrium**

- *Visual Component: A **Sankey Diagram**.* A massive flow representing "Commercial Commerce" (70 parts) runs alongside a small stream of "Individual Commerce" (1 part). A 1.4% sliver is shaved off both, merging perfectly to refill the human stream.
- *Copy:* The machine sustains the network. The sheer velocity of commercial supply chains perfectly funds the human cost of living.
- **Section 3: The Path to Abundance (Evolutionary Timeline)**
 - A visual roadmap establishing that the system does not support everyone instantly, but scales with commercial adoption.

The Spark

Phase 1: Mercury

The peer-to-peer genesis. Driven entirely by human-to-human time exchange. The dividend is small—proving the math and establishing trust.

Integration

Phase 2: Venus

Local commerce loops in. Small businesses and freelancers merge into the network, creating a sustainable environment where the dividend covers basic utilities.

The Unearthed Equilibrium

Phase 3: Earth

Parity. The 70x commercial engine fully sustains the human baseline. If a community desires a higher standard, they must collectively grow the commercial economy that sustains it.

Absolute Abundance

Phase 4: Beyond

The Star Trek economy. Automated AI commerce takes over the 70x engine. Humanity is freed from the profit motive to boldly go where no one has gone before.

Page 3: The Architecture Map (Visual Topology)

A dedicated, full-screen portal for systems thinkers to trace the logic of the network.

- **Tool Integration:** An embedded or full-window iframe of the Cathartic Curiosity node map tool.
- **UI Controls (Preset Views):** A sidebar or top-nav with guided buttons that append URL parameters to the map.
 - *Preset 1: "Trace the Deltar" (Highlights flow).*
 - *Preset 2: "The Personal Multiplier" (Zooms in on individual mechanics).*
 - *Preset 3: "The Dividend Engine" (Shows the routing of the split contribution).*

Page 4: The Sandbox (Interactive Simulators)

A page dedicated to letting users mathematically "prove" the system works themselves.

- **Interactive Tool 1: The 1% Per Zero Calculator**
 - *Inputs:* User A Balance, User B Balance, Favor duration.
 - *Output:* Calculates the exact shared contribution generated by the transaction, demonstrating the fairness of the split Log10 fee.
- **Interactive Tool 2: Test the Equilibrium**
 - *UI:* Sliders adjusting the "Commercial vs. Individual Ratio" (defaulting to 70:1) and the "Effective System Friction" (defaulting to 1.4%).
 - *Output:* A real-time readout proving that the Automatic Dividend successfully covers the human cost of living under these macroeconomic laws.

Page 5: The Assembly Room (Community & Build Status)

The collaborative workspace for the inner circle.

- **Section 1: The Build Status**
 - A transparent progress bar indicating the current development phase.
 - *Copy noting that professional coding is actively funded and underway, transitioning the system from theory to reality.*
- **Section 2: Peer Review & Discussion**
 - Direct gateways to the chosen community platform (Discord, Discourse, etc.) where members can stress-test the math and debate edge cases.
- **Section 3: Accelerate the Mission**
 - Clear avenues for members to contribute—whether through reviewing the whitepaper, beta testing the early software, or providing financial support for server architecture and deployment to early test communities.
